Capstone I Reflection

I chose to complete a different project for my Capstone. I will be working with the Watershed, Inc. on revamping their website to be able to collect data and review data. Right now, I am having positive thoughts about the overall project. I am working closely with the client to give them what they need to be more effective and efficient in helping the people that they serve. It seems that we are moving in the right direction and the client appears to be receptive and positive. I discovered that there are still companies that are lagging in the technology field. I just assumed that people knew how easy technology could make their life and would take advantage of it. I let my assumption that everyone used technology blind me. I also noticed that a lot of the employees that work at the Watershed are older. They are hesitant to use technology heavily. With the Watershed being a non-profit the most challenging moment we had was figuring out a budget. There were also times where we had a hard time meeting with everything going on with the pandemic. We struggled with video chat but figured out. I worked on figuring out time management. I struggled with my Capstone the first time because of my struggle with time management. I was able to handle that this time with a lot of planning. I learned that I must keep pushing.

I realized that I came up with the best solution when it made the client and myself were pleased with the results. Google Suite was the best this for the Watershed due to the budget and the live sharing of documents. With the tight funding that the Watershed receives, the cheaper the solution the better. This also could cause problems in implementing the solution. Overall, I am happy so far with where I am in my Capstone. The client and I are working well together and they seem to know exactly what they want. They know their limitations and it makes it easier for me

to plan a solution. I could definitely see the client having the potential to make a project like this hard.
